

Digital Retinal Imaging

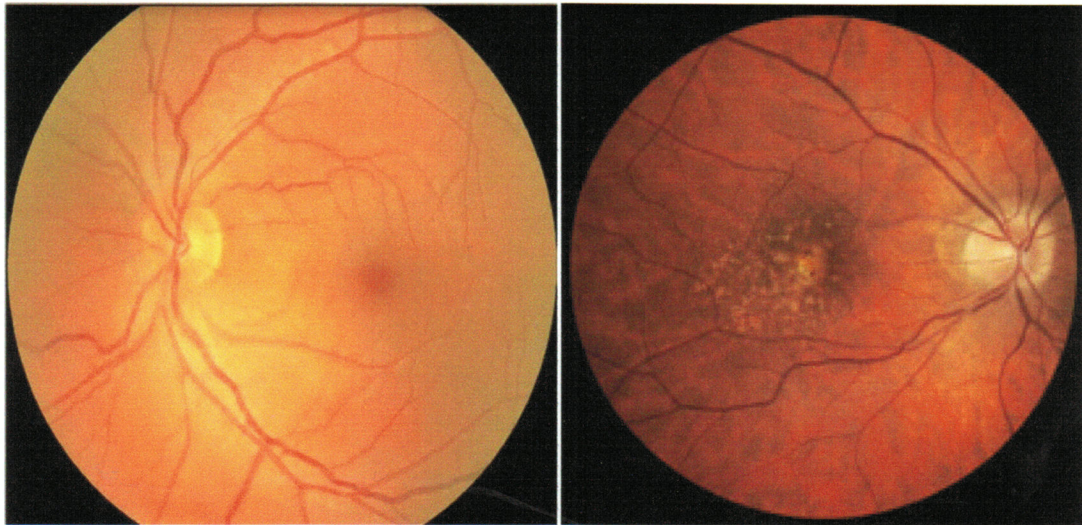

In our continued efforts to bring the most advanced technology available to our patients, Dr. Rosie Flores highly recommends the Digital Retinal Photo to be a part of your comprehensive eye exam, for all patients.

Many eye problems can develop without warning and progress with no symptoms. Early on, you might not even notice any change in your vision. However, diseases such as macular degeneration, glaucoma, retinal tears or detachments, as well as other health problems such as diabetes, high blood pressure and tumors can be detected with a thorough exam of the retina. The retina is the part of your eye that catches the image of what you are looking at, similar to the film in a camera.

A Digital Retina Image provides:

- A scan to confirm a healthy eye or, to detect the presence of disease.
- An overview or map of the retina, giving your doctor a more detailed view than she can achieve by other means.
- The opportunity for you to view and discuss the Retinal images of your eye with your doctor at the time of your exam.
- A permanent record for your medical file, enabling your Doctor to make important comparisons if potential problems show themselves at a future examination.

The Digital Retinal Imaging Exam is fast, easy, and comfortable.

Healthy Retina

Unhealthy Retina
(macular degeneration)

PLEASE NOTE: The Digital Retinal Image Exam is a “**non-covered service**” with most health plans, meaning that you would be responsible for the charges. Dr. Flores strongly believes the Retinal Image is an essential part of your comprehensive eye exam and highly recommends it for all patients once per year. Our fee for the Digital Retinal Image is \$25.

Please sign and date if you choose to decline this service. Thank you!
